- ❖ Results & Analysis
- ❖ Conclusion
- ❖ Future Scope
- ❖ References

Problem Statement

Clearly define the problem.

Group No.

Introduction

- Background of the project
- Motivation
- Relevance to industry/society

Objectives

- Objective 1
- Objective 2
- Objective 3

Group No.:

Literature Survey

Sr. No.	Author(s) / Year	Title Paper	Methodology / Approach Used	Findings / Limitations
1				
2				
3				
4				
5				
6				
7				

Group No.:

System Requirement Specification (SRS)

- Functional requirements
- Non-functional requirements
- Hardware & software requirements

System Architecture

Group No. :

Database

❑ Dataset Source

Example:

“Dataset used: Chest X-Ray Images (Pneumonia) — sourced from Kaggle (5863 images).”

❑ Dataset Description

Include:

Total number of records/images/samples

Number of features/columns

Label or target variable name

Example:

“Dataset contains 10,000 samples with 15 input features and one output label (‘Disease_Type’).”

❑ Data Attributes / Features

Create a small table

Data Preprocessing / Cleaning

- Show what transformations you applied:
- Handling missing values
- Label encoding / One-hot encoding
- Normalization or Standardization
- Removing duplicates
- Train-test split (e.g., 80%-20%)

ER Diagram

Group No. :

UML Diagrams

Group No. :

Algorithm

- ❑ Algorithm 1
- ❑ Algorithm 2
- ❑ Algorithm n

Implementation

- Tools, technologies.
- modules developed.

Testing

- Test cases
- validation methods
- performance evaluation.

Deployment

- How system is deployed (web/app/cloud).

Output

Results & Analysis

- Accuracy
- Graphs
- Confusion matrix

Conclusion

- Summary of achievements.

Future Scope

- Enhancements and scalability.

References

- IEEE format references
- Research papers, journals, books

THANK YOU
